

Barn Projects

The following is a list of some of the Antique and Historical Barn Restoration and Renovation projects that our office has completed. The work entailed renovation and restoration of the structure to business or residential use, stabilization work, restoration work to restore to original condition, and disassembling the structure and rebuilding at another location. Some of our work has been performing condition surveys to identify structural defects and developing drawings to repair the defects. The repair work varies between complete restoration to auxiliary type repairs for economical concern. Most of these projects were completed while working with the New Jersey Barn Company, Princeton New Jersey and are located on the East coast.
